

8 said processing method selected after said picture information is captured, said
9 processing method remaining in said memory after said memory is separated from
10 said camera; and

11 said picture information processed from said memory while said
12 memory is separated from said camera.

1 23. (As Amended) A picture transmission system comprising a
2 digital camera and a picture transmission unit said digital camera comprising:

3 a memory which is separatable from said camera;

4 a picture capturing unit for capturing picture information
5 corresponding to an image and for storing said picture information in said
6 memory;

7 a control information processor for storing in said memory a
8 processing method for indicating how said picture information is to be processed,
9 said processing method selected after said picture information is captured, said
10 processing method remaining in said memory after said memory is separated from
11 said camera;

12 said picture information processed from said memory while said
13 memory is separated from said camera;

14 and said picture transmission unit comprising:

15 processing means for performing transmission according to picture
16 information stored in said memory;

17 processing control information obtaining means for obtaining

18 transmission control information relating to said picture to be transmitted from
19 said memory; and

20 processing control means for instructing said processing means to
21 transmit said picture.

Please cancel claims 10-22 and 24-33.

Please add the following new claims:

1 34. (Newly Added) A digital camera according to claim 1, wherein
2 said picture information is processed based on the processing method stored in the
3 memory.

1 35. (Newly Added) A picture transmission system according to
2 claim 23, wherein said picture information is processed based on the processing
3 method stored in the memory.

1 36. (Newly Added) A digital camera according to claim 1, wherein
2 said processing method indicates to an external device how the external device is
3 to create a further image from the picture information stored in the memory.

1 37. (Newly Added) A picture transmission system according to
2 claim 23, wherein said processing method indicates to an external device how the
3 external device is to create a further image from the picture information stored in
4 the memory.

1 38. (Newly Added) A digital camera according to claim 1, wherein
2 said processing method is for controlling how said picture information is to be
3 processed outside of said memory.

1 39. (Newly Added) A picture transmission system according to
2 claim 23, wherein said processing method is for controlling how said picture
3 information is to be processed outside of said memory.
